

Cloud Application Suite

v5.33 Release Notes

Release Date: January 2021

We are pleased to announce the release of Cloud Application Suite v5.33. This release includes some significant improvements and new features.

Improvements

Benefit from reboot capabilities for T6 and T8

Admin users with the corresponding permissions can use the new reboot configuration fields in order to schedule individual or batch reboot of T6 and T8 devices updated with their latest firmware.

Get support for new T8 and N16 firmware

With this release, Commander adds support for T8 and N16 with firmware version 3.1.0.90.

Enjoy a friendlier Student Tracing interface

The latest improvements in the Student Tracing interface provide users with a better experience when using this tool through Commander.

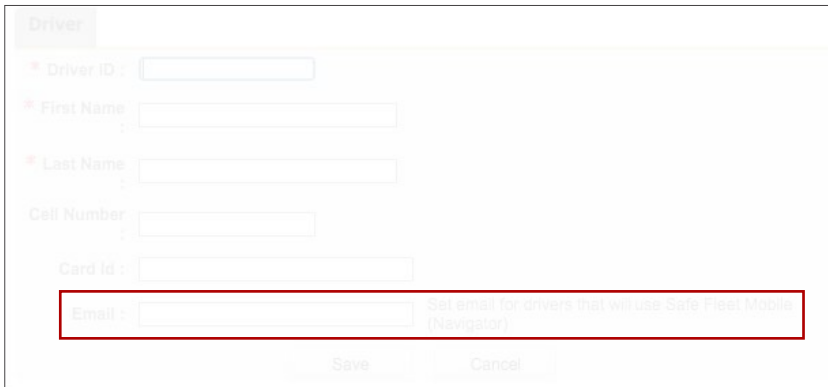

New Features

Use routes created for Student Tracking

Cloud Application Suite integrates the Route Management System with the Student Tracking software. As a result, those routes created can also be used with the MDT Student Tracking application.

Easily enable Drivers to use Student Tracking

Customers can now add an email address when creating new drivers in Fleet settings. Such email address is necessary for the system to trigger the Single Sign On process (SSO) and provide the customer with credentials for the drivers, so these can log in to **SFNav** with their MDT devices.

Driver

* Driver ID :

* First Name :

* Last Name :

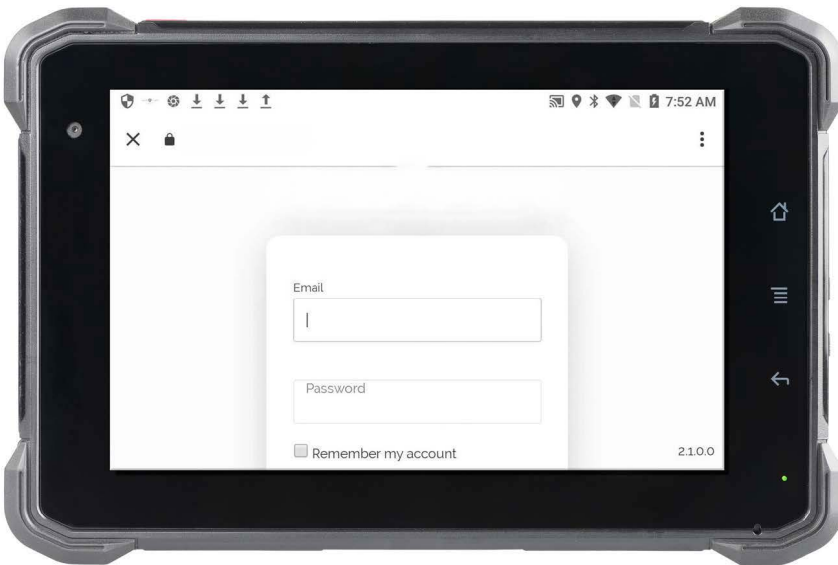

Cell Number :

Card Id :

Email : Set email for drivers that will use Safe Fleet Mobile (Navigator)

Save Cancel

Once the MDT is turned on, the login dialog will be presented to the drivers so they can enter their credentials and access the application.
